

Get an ERP Health Check - Free

Enable Digital Transformation Today

Maintaining ERP Agility

ERP is the backbone of your critical processes servicing the business, and must rapidly adopt to market changes. While ERP systems have evolved to balance business requirements with IT capabilities, the increased rate of change disrupts this balance and requires an agile ERP.

But is your ERP fit to meet these requirements?

Whether you are using SAP ERP or Oracle EBS, you can get an ERP health check at no charge and see the results within 48 hours.

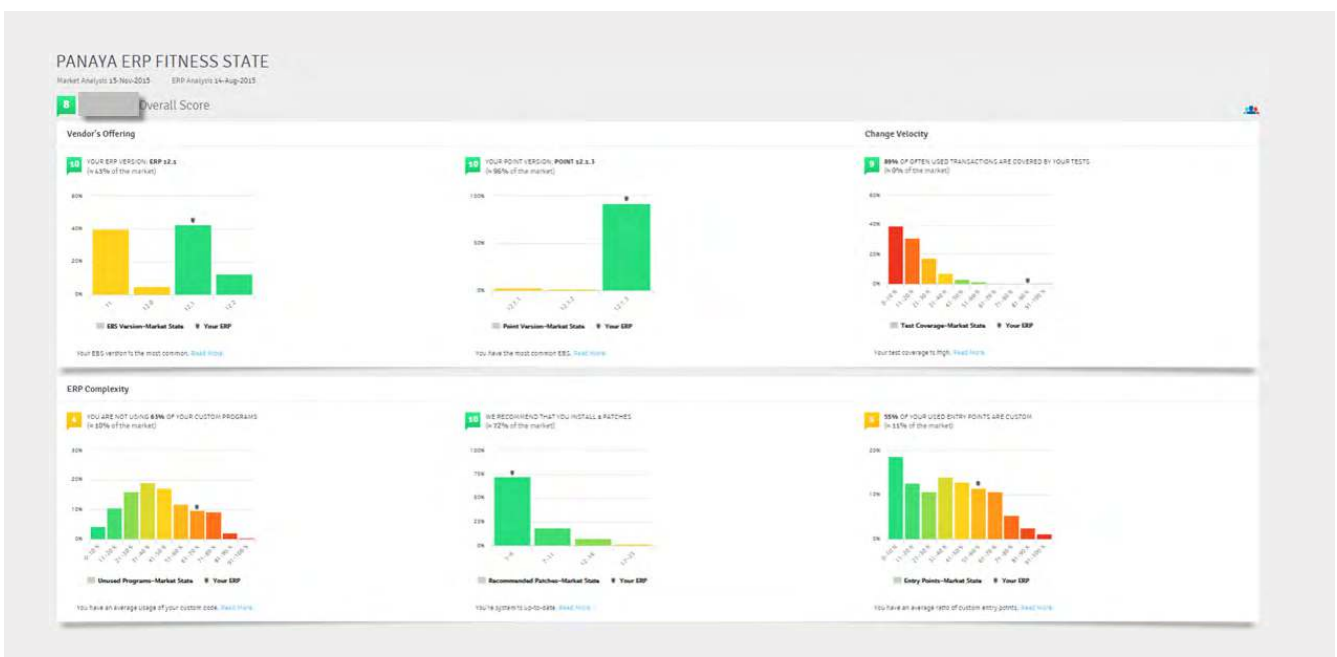

Panaya gives you an ERP fitness score based on a 360-degree review of your environment. Your ERP fitness score takes into consideration your ERP status in three dimensions.

The baseline for each dimension is taken from Panaya's big data analysis of over 5,000 SAP systems and 1,000 EBS systems and includes crowd insights from over 1,500 customers.

Vendor's Offering - The vendor offering score highlights how easy - or hard - it is for you to standardize on the latest vendor best practices.

The ERP Complexity score highlights the utilization of your custom code. Unused custom code is an unnecessary burden on your system which makes changes harder.

The Change Velocity - The Change Velocity score highlights your state of readiness for future test cycles by showing how many of your used transactions are covered by existing test scenarios.

Easily See The State of Your ERP

How Does It Work?

Very simple:

Takes **20 minutes** to upload your custom code to the **secure Panaya cloud**.

Within **48 hours**, we will provide you back with your full health check assessment.

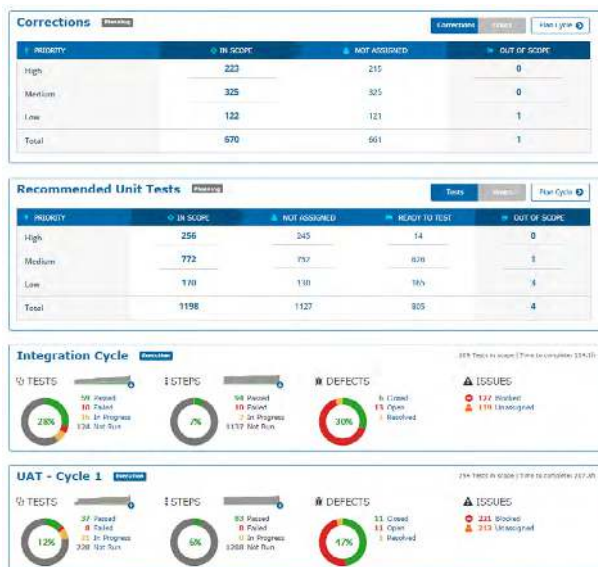

The effort is minimal. There is no installation required.

This comprehensive information would normally cost over \$50,000. With Panaya, you get it free of charge!

What's In It For You?

- ✓ Get **full visibility and understanding** of your ERP landscape before making changes
- ✓ **Plan** your ERP change projects based on **true ERP baseline information**
- ✓ Know how to **scope your project** - what might break, what to test, and what you can leave out
- ✓ **Identify** where you are falling behind - **Benchmark** against your peers
- ✓ **De-risk your environment** by knowing how to get back to standard
- ✓ **Test What Matters - Improve** testing coverage and efficiency
- ✓ **Identify** security gaps
