PANAYA S/4 360 SECURING YOUR SAP S/4HANA JOURNEY

O Panaya

360 DEGREES OF COVERAGE

Panaya S/4 360 is a three-year package that fully supports your SAP S/4HANA journey. Designed with broad expertise, this comprehensive suite of AI-driven solutions optimizes the ECC landscape for low-risk migration, helps build the business case, streamlines system conversions, and simplifies S/4HANA version upgrades and ongoing business changes.

Key Benefits

Innovate Faster and With Confidence

- Clear understanding of all risk factors, test scope, and gaps.
- Quick implementation of updates, migrations, and transports.
- Safe management of FPS, SPS, version upgrades, and business changes.
- Fully integrated test assets for accelerated remediations.

Visibility and Control

- A 360^0 overview of your current landscape.
- Comprehensive inventory of standard and custom components, satellite systems and interfaces.
- Powerful, strategic change intelligence for informed decisions.
- Control every step of your migration journey.

Migration Acceleration and De-risking

- SaaS simplicity for seamless business and IT collaboration.
- Complete conversion analysis and auto-code corrections in 48 hours.
- Unique insights, recommended Fiori apps, correlations, and risk identification.
- Fix only what's necessary, test only when needed.

AI and Best Practices

- Incorporate unique AI-based change intelligence.
- Adopt best practices based on real-world experience.
- Minimize business disruption throughout your journey.
- Meet all requirements with a certified SAP partner.

BOOK A DEMO

COMPLETE SUITE FOR ALL MIGRATION PHASES

ECC Optimization

Maintain your ECC landscape and take interim steps to prepare for low-risk conversion

Your SAP migration will be easier and faster with an optimized ECC landscape. After a deep analysis of your current system and its interfaces, you'll be able to go back-to-standard and achieve a clean core. In addition, you can easily move to the HANA database and upgrade to a higher-level EHP level.
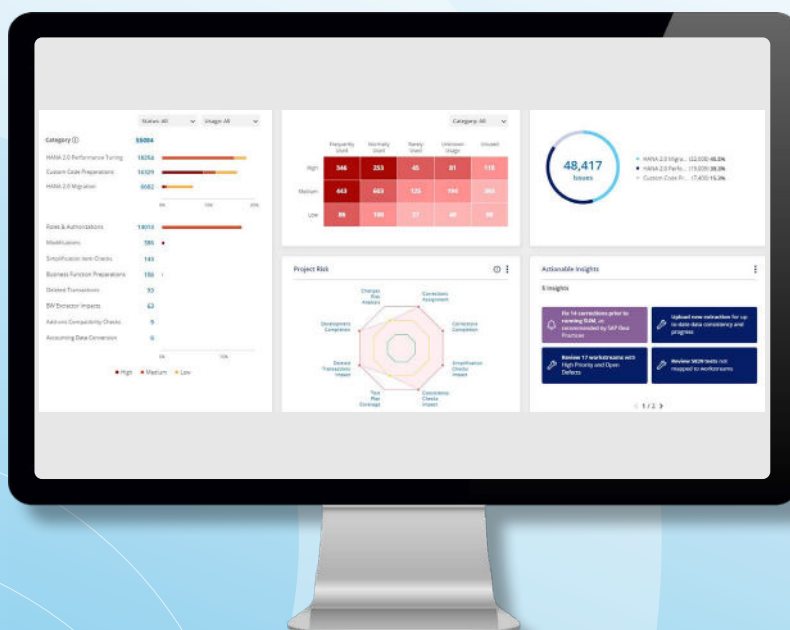

Pre-conversion Analysis

Uncover all your unknowns

A tailored pre-migration assessment package in under 48 hours.

The analysis includes a survey of technical and functional requirements, a consistency check for data (especially financial) to reconcile accounting components, and an S/4HANA compatibility review for add-ons, custom code, enhancements and more. The final report, delivered within two days, includes a detailed blueprint of object connections based on your production codebase.

Comprehensive impact analysis.

A critical part of preparatory analysis is understanding the implications of SAP S/4HANA for your specific system and business processes. The Panaya S/4 360 analysis provides immediate insight into objects, their production usage, defects, and test coverage, covering dozens of correction categories, over 70 correction types, and 11K deleted transactions. It identifies unique risk factors that all other tools do not. With guidance for corrections, optimizations, and remediation, you know precisely what will break, what to fix, and what to test.

O Panaya

BOOK A DEMO

Business Case Creation

Real data, no guesswork, cost-effective resource allocation

Build a data-driven business case.

To help build the business case for a SAP S/4HANA transition, Panaya S/4 360 provides a detailed breakdown of the projected effort, time and resources by activity category and type. The report includes precise cost estimates covering all requirements and an informed timeline estimate, with no SI or in-house expertise needed.

Know what personnel you need.

With the detailed information provided by Panaya S/4 360, it is easy to identify what teams you need, and with which capabilities, for each step of the process. You can then accurately estimate the person-hours dedicated to each workstream.

Understand the downstream business impact.

Panaya S/4 360 presents a full risk analysis, with a map of impacted entry points in your business process library. Optimization options are also offered to suit your regression cycle.

Preparation

Ensuring a low-risk conversion

Optimal project scoping.

The automatically generated, ready-to-execute plan is based on your actual code, customizations, and usage. This ensures a prioritization of tasks, corrections, and tests, as well as a minimized scope, highly focused on practical impact. You will know from the start which components and critical business processes need to be re-engineered, what Fiori apps are recommended, and where there are hidden risks.

Risk-based test plans at the click of a button.

Panaya instantly identifies gaps in test coverage. New test assets are also automatically and immediately generated for greater efficiency.

Ready-to-deploy intelligent code remediation.

Automatically generated large-scale code corrections are available for deployment directly into your dev system - at the click of a button. They provide 90% remediation for migration issues, simplifications, obsolete functions and cloned programs.

O Panaya

BOOK A DEMO

Migration

Rapid realization, real-time visibility

Full real-time visibility and control.

Panaya 360's risk analysis evaluates change impact, business process continuity and code quality as the S/4HANA migration project is underway. This gives you the information needed to prioritize and make corrections, automatically or manually. In addition, synchronized code remediation and closed-loop defect management reduce duplication of effort and increase efficiency.

Real-time, actionable insights

An intuitive and actionable project cockpit integrates with your current software development and delivery solutions. The built-in collaboration and documentation features include customized dashboards and reports. Centralized command-and-control also makes navigation between workstreams, corrections and test levels easy and seamless.

End-to-end business-process-centric test management.

The Panaya platform was designed specifically for SAP testing, with visibility into functional, regression, and UAT cycles. Accelerated and balanced testing is centrally managed and fully integrated with Worksoft's codeless automation platform.

SPS/FPS Upgrades and Business-Driven Changes

Don't compromise the long-term potential of S/4HANA

Stay on the cutting edge.

Panaya S/4 360 gives you the tools and capabilities to easily manage annual S/4HANA version upgrades, FPS/SPS releases, and your own business innovations. You can visualize dev, test and governance risk factors for pending releases and deployments, plan complete projects with automatic code corrections and testing, and identify post-go-live impacts and test gaps.

Ensure the best outcome – now and in the future.

Iteration testing makes sure the system runs as expected after your S/4HANA migration. Panaya S/4 360's record-and-play feature captures tests for codeless automation and full documentation, creating new manual and automated test assets.
